   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
10. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware references near GBP 16k, GBP xx.xx.5k and at least GBP 416k constrain distinct equipment-cost tiers, not global ASPs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware references near GBP 16k, GBP xx.xx.5k and at least GBP 416k constrain distinct equipment-cost tiers, not global ASPs.

11. Mettler-Toledo International Inc. - 2025 Form 10-K
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
12. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
    - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
    - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
    - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
    - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
    - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
    - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
13. Agilent Technologies - 2017 Annual Report
    - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
14. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
    - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
    - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
    - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

15. Agilent Technologies - Fiscal 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
16. Agilent Technologies - Q1 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
17. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
18. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
19. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
20. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

21. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, Instrumentation at xx.xx% and Solutions at xx.xx%, with Solutions declining slightly. The mixed-scope result constrains an aggressive connected-hardware adoption assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, Instrumentation at xx.xx% and Solutions at xx.xx%, with Solutions declining slightly. The mixed-scope result constrains an aggressive connected-hardware adoption assumption.
22. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
23. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
24. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
25. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

13.1. Food and Beverage Products and Ingredients

Table 160. Global Food Safety Testing Equipment Market, by Food and Beverage Products and Ingredients growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)
Cereals and Bakery Products	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Confectionery and Sweeteners	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Dairy Products and Alternatives	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Edible Ices	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Eggs and Egg Products	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Fats, Oils, and Fat Emulsions	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Fish and Seafood Products	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Food Additives and Processing Aids	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Fruits, Vegetables, Nuts, and Seeds	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Meat and Poultry Products	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Non-Dairy Beverages and Packaged Drinking Water	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Prepared Meals and Composite Dishes	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Ready-to-Eat Savory Snacks	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Salt, Spices, Soups, Sauces, Salads, and Protein Products	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Special Dietary Foods and Supplements	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Food Categories - Codex GSFA
   - Taxonomy evidence: The Codex hierarchy provides recognized food descriptors, not equipment-spending segments. Adapting its categories therefore requires explicit product crosswalks. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories))
   - Taxonomy evidence: The classification supplies commodity descriptors for foods and ingredients. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.

2. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware references near GBP 16k, GBP xx.xx.5k and at least GBP 416k constrain distinct equipment-cost tiers, not global ASPs.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware references near GBP 16k, GBP xx.xx.5k and at least GBP 416k constrain distinct equipment-cost tiers, not global ASPs.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Cost-tier differentiation supports a priced laboratory allocation rather than treating all dairy-related purchasing exposures equally.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Cost-tier differentiation supports a priced laboratory allocation rather than treating all dairy-related purchasing exposures equally.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hardware-cost dispersion constrains the value bridge for cereal and bakery exposure; retained forecast hardware mix is an assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hardware-cost dispersion constrains the value bridge for cereal and bakery exposure; retained forecast hardware mix is an assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: High-cost analytical equipment and lower-cost readers require separate value weights; seafood-specific exposure counts remain modeled.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: High-cost analytical equipment and lower-cost readers require separate value weights; seafood-specific exposure counts remain modeled.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost-tier evidence constrains equipment-value weighting, not the assumed supplement purchasing volume.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost-tier evidence constrains equipment-value weighting, not the assumed supplement purchasing volume.

4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.

33. Food and Beverage Resource Guide for Commercial Food Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
34. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.
35. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
36. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.

13.1.1. Meat and Poultry Products

Table 164. Global Food Safety Testing Equipment Market Size, by Meat and Poultry Products, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 165. Global Food Safety Testing Equipment Market Size, by Meat and Poultry Products, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Meat and meat products, including poultry and game (08.0) - Codex

   · Taxonomy evidence: Food category xx.xx covers fresh and processed meat, poultry, and game products. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=4073ded6-249a-f111-b8dc-70a8a5613865))

2. Processing & Marketing - Food and Beverage Manufacturing

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.

13.1.2. Cereals and Bakery Products

Table 167. Global Food Safety Testing Equipment Market Size, by Cereals and Bakery Products, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 168. Global Food Safety Testing Equipment Market Size, by Cereals and Bakery Products, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Food Categories - Codex GSFA
   - Taxonomy evidence: The hierarchy places soybean beverages under cereal/soybean products, while separately identifying bakery products. This prevents treating the retained combined node as a literal import of all underlying codes. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories))
   - Taxonomy evidence: Bakery products are category xx.xx. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
2. Cereals and cereal products, excluding bakery wares (06.0) - Codex
   - Taxonomy evidence: Food category xx.xx includes unprocessed and processed cereal products and distinguishes bakery category xx.xx; the proposed node combines these two explicit groups. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=1773ded6-249a-f111-b8dc-70a8a5613865))
3. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
4. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hardware-cost dispersion constrains the value bridge for cereal and bakery exposure; retained forecast hardware mix is an assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hardware-cost dispersion constrains the value bridge for cereal and bakery exposure; retained forecast hardware mix is an assumption.

5. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

6. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
7. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
8. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

9. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
10. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

11. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
12. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
13. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
14. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
15. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
16. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

17. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
18. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
19. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
20. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
21. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
22. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

23. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
24. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
25. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
26. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
27. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
28. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

29. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
30. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
31. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
32. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
33. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.

13.1.3. Dairy Products and Alternatives

Table 170. Global Food Safety Testing Equipment Market Size, by Dairy Products and Alternatives, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 171. Global Food Safety Testing Equipment Market Size, by Dairy Products and Alternatives, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
G7	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Dairy Products and Analogues, Excluding Products of Category 02.0 (01.0) - Codex

   · Taxonomy evidence: The official dairy descriptor recognizes dairy products and a defined analog subset involving replacement of milk fat. It does not establish that every commercially described dairy alternative belongs to this official category. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=b272ded6-249a-f111-b8dc-70a8a5613865))

   · Taxonomy evidence: Food category xx.xx recognizes dairy products and defined analogs while excluding category xx.xx fat products. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=b272ded6-249a-f111-b8dc-70a8a5613865))

2. Processing & Marketing - Food and Beverage Manufacturing

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Cost-tier differentiation supports a priced laboratory allocation rather than treating all dairy-related purchasing exposures equally.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Cost-tier differentiation supports a priced laboratory allocation rather than treating all dairy-related purchasing exposures equally.

4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.

17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.

18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
- Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.

19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.

20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.

21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
33. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
34. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.

13.1.4. Fruits, Vegetables, Nuts, and Seeds

Table 173. Global Food Safety Testing Equipment Market Size, by Fruits, Vegetables, Nuts, and Seeds, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 174. Global Food Safety Testing Equipment Market Size, by Fruits, Vegetables, Nuts, and Seeds, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
G7	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Fruits and vegetables, seaweeds, and nuts and seeds (04.0) - Codex
   - Taxonomy evidence: Food category xx.xx recognizes fresh and processed produce and includes fungi, roots, legumes, seaweeds, nuts, and seeds. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=e572ded6-249a-f111-b8dc-70a8a5613865))
2. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.

13.1.5. Non-Dairy Beverages and Packaged Drinking Water

Table 176. Global Food Safety Testing Equipment Market Size, by Non-Dairy Beverages and Packaged Drinking Water, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 177. Global Food Safety Testing Equipment Market Size, by Non-Dairy Beverages and Packaged Drinking Water, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
G7	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Food Categories - Codex GSFA

· Taxonomy evidence: Soybean beverages and the main beverage category appear in different parts of the hierarchy. Assigning all non-dairy beverage-form products to one retained node is an analytical adaptation, not an official equivalence.
([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories))

· Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.

· Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.

2. Beverages, Excluding Dairy Products (14.0) - Codex

· Taxonomy evidence: The official beverage descriptor recognizes alcoholic and nonalcoholic beverages and places dairy-based beverages in the dairy category. This supports a beverage-versus-dairy distinction but not a complete equipment-market allocation.
([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=a073ded6-249a-f111-b8dc-70a8a5613865))

· Taxonomy evidence: Food category xx.xx distinguishes alcoholic and nonalcoholic beverages from dairy-based beverages, which remain in category xx.xx.
([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=a073ded6-249a-f111-b8dc-70a8a5613865))

3. Processing & Marketing - Food and Beverage Manufacturing

· Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.

· Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

· Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

· Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

4. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

· Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.

· Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.

5. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

6. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
7. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
8. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

9. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
10. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

11. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
12. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
13. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
14. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
15. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
16. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

17. Eurofins Scientific - FY 2025 Results Presentation
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.

18. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.

19. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
- Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.

20. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.

21. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.

22. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

23. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
24. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
25. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
26. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
27. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
28. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

29. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
30. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
31. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
32. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
33. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.

13.1.6. Fish and Seafood Products

Table 179. Global Food Safety Testing Equipment Market Size, by Fish and Seafood Products, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Fish and fish products, including mollusks, crustaceans, and echinoderms (09.0) - Codex

   · Taxonomy evidence: Food category xx.xx recognizes fresh and processed aquatic food products, including mollusks and crustaceans.
   ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=5373ded6-249a-f111-b8dc-70a8a5613865))

2. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: High-cost analytical equipment and lower-cost readers require separate value weights; seafood-specific exposure counts remain modeled.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: High-cost analytical equipment and lower-cost readers require separate value weights; seafood-specific exposure counts remain modeled.

4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
33. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.

13.1.7. Salt, Spices, Soups, Sauces, Salads, and Protein Products

Table 182. Global Food Safety Testing Equipment Market Size, by Salt, Spices, Soups, Sauces, Salads, and Protein Products, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 183. Global Food Safety Testing Equipment Market Size, by Salt, Spices, Soups, Sauces, Salads, and Protein Products, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Food Categories - Codex GSFA

   · Taxonomy evidence: Category xx.xx covers seasonings, soups, sauces, salads, yeast, and protein products. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories))

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.

2. Processing & Marketing - Food and Beverage Manufacturing

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.

13.1.8. Confectionery and Sweeteners

Table 185. Global Food Safety Testing Equipment Market Size, by Confectionery and Sweeteners, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 186. Global Food Safety Testing Equipment Market Size, by Confectionery and Sweeteners, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Food Categories - Codex GSFA
   - Taxonomy evidence: Confectionery is category xx.xx. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
2. Sweeteners, including honey (11.0) - Codex
   - Taxonomy evidence: Food category xx.xx recognizes sugars, sweetener products, and honey, supporting the sweetener portion of the combined commodity group. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=6e73ded6-249a-f111-b8dc-70a8a5613865))
3. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
4. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.

5. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

6. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
7. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
8. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

9. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
10. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

11. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
12. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
13. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
14. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
15. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
16. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

17. Eurofins Scientific - FY 2025 Results Presentation
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.

18. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.

19. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
- Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.

20. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.

21. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.

22. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

23. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
24. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
25. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
26. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
27. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
28. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

29. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
30. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
31. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
32. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
33. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.

13.1.9. Prepared Meals and Composite Dishes

Table 188. Global Food Safety Testing Equipment Market Size, by Prepared Meals and Composite Dishes, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 189. Global Food Safety Testing Equipment Market Size, by Prepared Meals and Composite Dishes, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
G7	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Prepared foods (16.0) - Codex

   · Taxonomy evidence: The prepared-food descriptor recognizes multi-component foods requiring limited consumer preparation. The proposed category uses that positive product definition rather than a generic unmatched-food remainder. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=c673ded6-249a-f111-b8dc-70a8a5613865))

2. Processing & Marketing - Food and Beverage Manufacturing

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.

4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.

17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.

18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
- Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.

19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.

20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.

21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
33. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.

13.1.10. Special Dietary Foods and Supplements

Table 191. Global Food Safety Testing Equipment Market Size, by Special Dietary Foods and Supplements, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 192. Global Food Safety Testing Equipment Market Size, by Special Dietary Foods and Supplements, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
G7	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
GCC	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
NATO	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Table 193. Global Food Safety Testing Equipment Market Size, by Special Dietary Foods and Supplements, by Country, 2017-2040 (USD Million)

Country	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Australia	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Brazil	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Canada	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
China	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
France	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Germany	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
India	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Italy	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Japan	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Mexico	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Russia	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Others	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Sources & Evidence

1. Food Categories - Codex GSFA
   - Taxonomy evidence: Category xx.xx separately includes infant, medical, dietetic, and supplement products. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
2. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost-tier evidence constrains equipment-value weighting, not the assumed supplement purchasing volume.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost-tier evidence constrains equipment-value weighting, not the assumed supplement purchasing volume.

4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
33. Food and Beverage Resource Guide for Commercial Food Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.

13.1.11. Ready-to-Eat Savory Snacks

Table 194. Global Food Safety Testing Equipment Market Size, by Ready-to-Eat Savory Snacks, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 195. Global Food Safety Testing Equipment Market Size, by Ready-to-Eat Savory Snacks, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

United States	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Others	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Sources & Evidence

1. Food Categories - Codex GSFA
   - Taxonomy evidence: Category xx.xx includes starch-based, processed-nut, and fish snacks. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
2. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.

13.1.12. Food Additives and Processing Aids

Table 197. Global Food Safety Testing Equipment Market Size, by Food Additives and Processing Aids, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 198. Global Food Safety Testing Equipment Market Size, by Food Additives and Processing Aids, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)

Sources & Evidence

1. Joint FAO/WHO Expert Committee on Food Additives (JECFA) - FAO

   · Taxonomy evidence: JECFA's public mandate includes safety assessment of food additives, flavoring agents, and processing aids, and development of food-additive specifications. This supports material identity and safety relevance, not equipment spending. ([fao.org](https://www.fao.org/food-safety/scientific-advice/jecfa/))

2. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.

4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
33. Food and Beverage Resource Guide for Commercial Food Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.

13.1.13. Fats, Oils, and Fat Emulsions

Table 200. Global Food Safety Testing Equipment Market Size, by Fats, Oils, and Fat Emulsions, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Others	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Sources & Evidence

1. Fats and oils, and fat emulsions (02.0) - Codex
   - Taxonomy evidence: Food category xx.xx encompasses fat-based products from vegetable, animal, marine, or mixed sources. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=d872ded6-249a-f111-b8dc-70a8a5613865))
2. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
33. Food and Beverage Resource Guide for Commercial Food Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.

13.1.14. Eggs and Egg Products

Table 203. Global Food Safety Testing Equipment Market Size, by Eggs and Egg Products, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Eggs and egg products (10.0) - Codex

   · Taxonomy evidence: Food category xx.xx separately recognizes fresh eggs and egg products. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=6673ded6-249a-f111-b8dc-70a8a5613865))

2. Processing & Marketing - Food and Beverage Manufacturing

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
33. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
34. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

13.1.15. Edible Ices

Table 206. Global Food Safety Testing Equipment Market Size, by Edible Ices, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 207. Global Food Safety Testing Equipment Market Size, by Edible Ices, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
G7	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
GCC	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
NATO	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Table 208. Global Food Safety Testing Equipment Market Size, by Edible Ices, by Country, 2017-2040 (USD Million)

Country	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Australia	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Brazil	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Canada	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
China	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
France	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Germany	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
India	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Italy	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Japan	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Mexico	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Russia	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Edible ices, including sherbet and sorbet (03.0) - Codex
   - Taxonomy evidence: Food category xx.xx covers water-based frozen desserts and confections and distinguishes them from primarily dairy frozen desserts. ([codex.fao.org](https://codex.fao.org/codex-texts/codex-online-databases/gsfa/food-categories/food-category-details?categoryId=e472ded6-249a-f111-b8dc-70a8a5613865))
2. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
33. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.

13.2. Food-Chain Environments

Table 209. Global Food Safety Testing Equipment Market Size, by Food-Chain Environments, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 210. Global Food Safety Testing Equipment Market Size, by Food-Chain Environments, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
G7	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
GCC	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
NATO	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Table 211. Global Food Safety Testing Equipment Market Size, by Food-Chain Environments, by Country, 2017-2040 (USD Million)

Country	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Australia	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Brazil	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Canada	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
China	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
France	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Germany	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Sources & Evidence

1. Environmental Sampling - FDA

· Taxonomy evidence: FDA distinguishes environmental contamination on food-contact and non-food-contact surfaces from product sampling. This directly supports the surface-contamination subset, not every airborne or condition-monitoring use. ([fda.gov](https://www.fda.gov/food/sampling-protect-food-supply/environmental-sampling))

· Taxonomy evidence: FDA distinguishes food-production environmental samples from product samples and recognizes both food-contact and non-food-contact surfaces. This directly supports the surface-contamination portion of the environmental matrix, not every proposed environmental-monitoring use. ([fda.gov](https://www.fda.gov/food/sampling-protect-food-supply/environmental-sampling))

· Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

· Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

2. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
3. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.

4. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

5. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
6. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
7. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

8. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
9. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

10. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
11. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
12. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
13. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
14. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, Instrumentation at xx.xx% and Solutions at xx.xx%, with Solutions declining slightly. The mixed-scope result constrains an aggressive connected-hardware adoption assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, Instrumentation at xx.xx% and Solutions at xx.xx%, with Solutions declining slightly. The mixed-scope result constrains an aggressive connected-hardware adoption assumption.
15. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

16. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
17. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
18. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
19. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
20. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
21. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

22. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
23. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
24. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
25. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
26. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
27. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

28. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
29. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
30. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
31. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
32. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
33. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

13.3. Agricultural, Ingredient, and Process Water

Table 212. Global Food Safety Testing Equipment Market Size, by Agricultural, Ingredient, and Process Water, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 213. Global Food Safety Testing Equipment Market Size, by Agricultural, Ingredient, and Process Water, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
G7	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
GCC	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
NATO	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Table 214. Global Food Safety Testing Equipment Market Size, by Agricultural, Ingredient, and Process Water, by Country, 2017-2040 (USD Million)

Country	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Australia	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Brazil	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Rapid In-Field Diagnostics: Horizon Scanning and Technology Readiness Level Study With a Technology Pilot Study - FSA Research and Evidence

   · Taxonomy evidence: The documented irrigation-water setting establishes food-chain input-water relevance rather than packaged drinking-water testing. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx-rapid-in-field-diagnostics-horizon-scanning-and-technology-readiness-level-study-with-a-technology-pilot-study))

2. Safe water saves water - FAO

   · Taxonomy evidence: FAO describes food-safety considerations for water used throughout food production and processing and distinguishes suitability by intended use. This supports a food-chain input-water matrix distinct from beverage products. ([fao.org](https://www.fao.org/newsroom/story/Safe-water-saves-water/))

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.

3. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
4. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.

5. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

6. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
7. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
8. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

9. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
10. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

11. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
12. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
13. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
14. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
15. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
16. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

17. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
18. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
19. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.
20. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
21. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
22. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

23. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
24. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
25. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
26. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
27. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
28. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

29. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
30. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
31. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
32. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
33. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.

13.4. Food-Contact Materials and Articles

Table 215. Global Food Safety Testing Equipment Market Size, by Food-Contact Materials and Articles, by Region, 2017-2040 (USD Million)

Region	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Africa	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Asia-Pacific	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Europe	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Latin America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Middle East	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
North America	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 216. Global Food Safety Testing Equipment Market Size, by Food-Contact Materials and Articles, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
G7	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Legislation - Food-Contact Materials - European Commission

   · Taxonomy evidence: The Commission identifies migration assessment and compliance documentation within food-contact-material safety. This supports a material-safety matrix distinct from surface contamination.
   ([food.ec.europa.eu](https://food.ec.europa.eu/food-safety/chemical-safety/food-contact-materials/legislation_en))

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.

2. Food Packaging & Other Substances that Come in Contact with Food - Information for Consumers - FDA

   · Taxonomy evidence: FDA explains that food-contact substance safety review considers testing data on migration into food and consumer exposure. This establishes contact materials as a distinct safety-assessment subject.
   ([fda.gov](https://www.fda.gov/food/food-ingredients-packaging/food-packaging-other-substances-come-contact-food-information-consumers))

3. Processing & Marketing - Food and Beverage Manufacturing

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.

4. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.

5. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

6. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
7. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
8. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

9. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
10. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

11. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
12. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
13. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
14. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
15. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
16. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

17. Eurofins Scientific - FY 2025 Results Presentation
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.

18. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.

19. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
- Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.

20. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.

21. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.

22. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

23. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
24. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
25. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
26. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
27. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
28. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

29. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
30. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
31. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
32. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
33. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
34. Food and Beverage Resource Guide for Commercial Food Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

14. Food Safety Testing Equipment Market, by Region

■■■■■■■■■■■■ ■■■■■■■■■ ■■■■■■■■■■■■■ ■■■■■■ ■■■ ■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■■■ ■■■ ■■■■■ ■■■■■ ■■■■ ■■■ ■■ ■■■■■■■ ■■ ■■■ ■■■■■■ ■■■■■■■■■■■■ ■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■ ■■■■ ■■■■■■■ ■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■ ■■■■■■■■■■■■■ ■■■■■■■ ■■■■■■■■■■■ ■■■ ■■■■■■■■■ ■■■■■■■ ■■■■■■ ■■■■■ ■■■■■ ■■■■■■■ ■■■■■■■■■■■■■ ■■■■■ ■■■■■■■ ■■■ ■■■■■■■■ ■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■■■■■■■ ■■■■■■■■■■ Suppliers should therefore identify the accepted laboratory operator before choosing a regional sales base. These arrangements do not establish equivalent equipment availability or recognition across Asia-Pacific.

North America requires separate qualification of regulatory acceptance pathways. ■■■■■ ■■■■ ■■■■■■■ ■■■■■■■ ■■ ■■■■■■■■■ ■■ ■■■■■■■ ■■■■■■■■■■■■■■ ■■■■■■■ ■■■■■■■■ ■■■■ ■■■■■ ■■■■ ■■■■■■■■■■■■■ ■■■■■■ ■■■■ ■■■■■■■■■■■ ■■■■■■■■■■■■■■■ ■■■■■■■■■■■■■■ ■ ■■■■■■■ ■■■■■■■■■■■■■ ■■■■■■■■ ■■■■ ■■■ ■■■■ ■■■■■ ■■■■■■■■■■■■■ ■■■■■■■■■■■■■■■■■ Laboratory buyers should establish the intended accepted activity before choosing equipment; suppliers can reuse relevant commercial documentation without promising a region-wide laboratory permission.

Latin America includes institutional purchasing relationships that cannot be inferred from food-manufacturing activity alone. ■■■■■■■■ ■■■■■ ■■■■ ■■■■■■■■■■ ■■■■■■ ■■ ■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■ ■■ ■■■■■■■■■■ ■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■ ■■■ ■■■■■■■ ■■■■■■■■■■■■■ ■■ ■■■■■■■■ ■■■■■■■■■■■■ ■■■■ ■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■ ■■ ■■■■■■■■■■■ ■■■■■■■■■■ ■■■■■ ■■■■■■ ■■■■ ■■■■■■■■ ■■■■■ ■■■■■■■■■■ ■■■■■■■■ ■■ ■■■■■■■■■ ■■■■■■■■■■■■ The Brazilian arrangement does not establish the recognition or purchasing conditions of neighboring countries.

■■■■■■■■ ■■■■■■■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■ ■■■■■■■■■■■■■ ■■■■■■■ ■■ ■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■ ■■■ ■■ ■■■■■■■■■■ ■■■■■■■■ ■■■■■■■■ ■■ ■■■■■■■■ ■■■■■ ■■■■■■■■■■■■■ ■■■ ■■■■■■■■■■ ■■■■■■■■ ■■■■■■■■■■■■■ ■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■ A supplier targeting these buyers must connect its offering to the laboratory's accepted scope rather than present instrument acquisition as designation. This EU mechanism should not be extended automatically to every European country or to a manufacturer's internal quality-control laboratory.

■■■ ■■■■■■■ ■■■■ ■■■■■■■ ■■■■■■■■■■ ■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■ ■■■■■■■ ■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■ ■■■■■ ■■■■■■■■■■■■ ■■■■■■■ ■■■■■■■■■■ ■ ■■■■■ ■■■■■■■■■■ ■■■ ■ ■■■■■■■ ■■■■ ■■■■■■■■ ■■■■■■■■■ For an inspection-system buyer elsewhere in the region, that provides a route for obtaining a proposal, not proof of installation support, warranty authority, or coverage at the destination. A regional arrangement is suitable only when the actual location and obligations are included in the contract.

Africa likewise requires a distinction between a supplier's regional footprint and its undertaking at a particular site. Ishida lists operations in Nairobi and South Africa. ■■■■■ ■■■ ■■■■■■■■ ■■■■■■■■■■ ■■■■■■■ ■■■■■■■■ ■■■ ■■■■■■■■■ ■■ ■■■■■■■■■■ ■■■■■■■■ ■■■■■■■ ■■■ ■■■■■■■■■■ ■■■■■■■ ■■■■■■■ ■■■■■■■■■■ ■■■■■ ■■■■■■■ ■■■■ ■■■■■■■ ■■■ ■■■■■■■■ ■■■ ■■■■■■■■■

Sources & Evidence

1. Laboratory Accreditation for Analyses of Foods (LAAF) Program & Final Rule

   · FDA states that LAAF applies to specified testing circumstances rather than all food testing and describes accreditation bodies and accredited laboratories as distinct program participants. ([fda.gov](https://www.fda.gov/food/food-safety-modernization-act-fsma/laboratory-accreditation-analyses-foods-laaf-program-final-rule))

2. Ramping Up Singapore's Food Testing Capabilities

   · SFA's January xx.xx 2023 account describes recognized private laboratories supporting regulatory and industry testing needs. It establishes a documented institutional model rather than uniform regional availability. ([sfa.gov.sg](https://www.sfa.gov.sg/food-for-thought/article/detail/ramping-up-singapore%27s-food-testing-capabilities))

3. Legislation on Official Controls

   · The European Commission identifies accreditation as a condition for official-control laboratory designation and describes permanent and temporary derogations. Its scope does not establish rules for every European laboratory. ([food.ec.europa.eu](https://food.ec.europa.eu/horizontal-topics/official-controls-and-enforcement/legislation-official-controls_en))

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.

4. CFIA Framework for Quality Management Oversight of Laboratories Conducting Testing in Areas Under the CFIA Mandate

   · CFIA works with SCC and CALA accreditation arrangements incorporating agency-specific requirements. These relationships support a Canadian acceptance comparison distinct from US LAAF. ([inspection.canada.ca](https://inspection.canada.ca/en/food-safety-industry/food-chemistry-and-microbiology/laboratory-management/qmof))

5. Laboratórios Credenciados - Ministério da Agricultura e Pecuária

   · MAPA describes accredited third-party public or private laboratories as complementary to federal laboratory functions. ([gov.br](https://www.gov.br/agricultura/pt-br/assuntos/defesa-agropecuaria/laboratorios-credenciados/laboratorio-credenciado))

6. Contact Us - Ishida

   · Ishida lists a Dubai operation, a Middle East service contact, an East African operation in Nairobi, and a South African operation. These establish commercial contact points, not destination-specific contractual coverage. ([ishida.com](https://www.ishida.com/ww/en/contact-us/))

7. Foreign Official Laboratories - Ministry of Health, Labour and Welfare

   · Japan lists accepted foreign laboratories under differing export-origin coverage, demonstrating an offshore evidence route within Asia-Pacific. ([mhlw.go.jp](https://www.mhlw.go.jp/stf/seisakunitsuite/bunya/kenkou_iryou/shokuhin/yunyu_kanshi/index_00019.html))

8. Processing & Marketing - Food and Beverage Manufacturing

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.

9. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
10. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.

11. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
    - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
    - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
    - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
    - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
    - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
    - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
12. Agilent Technologies - 2017 Annual Report
    - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.
13. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
    - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
    - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
    - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

14. Agilent Technologies - Fiscal 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
15. Agilent Technologies - Q1 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

16. Waters Corporation - 2025 Annual Report
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
17. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
18. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
19. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
20. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
21. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

22. Eurofins Scientific - FY 2025 Results Presentation
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.

23. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.

24. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
- Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.

14.1. North America

Table 220. North America Food Safety Testing Equipment Market, by Country growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)
Canada	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Processing & Marketing - Food and Beverage Manufacturing

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Geographic customer-destination sales constrain the inspection/monitoring proxy, with an assumed North American share of the Americas bucket.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 customer ship-to regional revenues provide the laboratory-equipment geographic proxy. North America and Latin America require explicit modeled separation of the Americas bucket.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))

10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
19. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
20. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
21. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
22. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))

23. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
24. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))
25. Testo - Annual Press Conference, February 19, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

26. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

27. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
28. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

29. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
30. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
31. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
32. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

33. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
34. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
35. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
36. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
37. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

38. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
39. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
40. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
41. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
42. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

43. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
44. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
45. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
46. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.

47. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
48. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
49. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
50. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
51. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.

52. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
53. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
54. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
55. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
56. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

57. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

58. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

59. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

60. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

61. Food and Beverage Resource Guide for Commercial Food Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

62. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
63. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

64. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
65. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
66. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
67. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

Sources & Evidence

1. **Processing & Marketing - Food and Beverage Manufacturing**

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K

- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World customer-destination revenue supports the scope-adjusted inspection/monitoring geographic proxy and its forecast starting position.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2025 Asia-Pacific customer-destination revenue constrains the laboratory portion of the regional allocation; the 2032 change is a modeled relative adoption scenario.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))

10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
19. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
20. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
21. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
22. Food Standards Australia New Zealand - Standard 3.2.2A Food safety management tools
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
23. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))

24. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
25. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))
26. Testo - Annual Press Conference, February 19, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

27. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

28. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
29. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

30. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
31. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
32. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
33. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

34. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
35. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
36. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
37. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
38. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

39. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
40. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
41. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
42. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
43. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

44. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
45. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
46. Laboratory Accreditation for Analyses of Foods (LAAF) Program & Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
47. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.

48. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
49. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
50. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
51. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
52. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.

53. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
54. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
55. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
56. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
57. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.

58. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

59. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

60. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

61. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

62. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

63. Food and Beverage Resource Guide for Commercial Food Testing Laboratories

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

64. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
65. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

66. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
67. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
68. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
69. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

14.3. Europe

Sources & Evidence

1. Processing & Marketing - Food and Beverage Manufacturing

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K

- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European customer-destination revenue is the observed broad-scope input for inspection/monitoring allocation.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: European destination revenue constrains the laboratory proxy; the three-way Europe/Middle East/Africa adjustment is an explicit allocation assumption.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))

10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2023 national turnover and value added support the modeled score xx.xx*T+xx.xx*VA and its forecast starting weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2023 national turnover and value added support the modeled score xx.xx*T+xx.xx*VA and its forecast starting weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: National food/drink turnover and value added constrain the activity score; no equipment percentage is directly reported.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: National food/drink turnover and value added constrain the activity score; no equipment percentage is directly reported.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Danish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Danish food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Finnish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Finnish food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Dutch food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Dutch food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Polish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Polish food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Portuguese food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Portuguese food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Swedish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Swedish food-industry turnover/value-added inputs.

19. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
20. European Commission - Legislation on official controls
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official-control requirements locate institutional buyers and laboratory recognition conditions, not common European purchasing authority or an observed equipment share.
21. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))

22. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
23. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))
24. Testo - Annual Press Conference, February 19, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

25. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

26. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
27. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

28. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
29. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
30. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
31. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

32. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
33. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
34. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
35. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
36. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

37. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
38. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
39. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
40. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
41. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

42. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
43. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
44. Laboratory Accreditation for Analyses of Foods (LAAF) Program & Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
45. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.

46. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
47. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
48. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
49. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
50. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.

51. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
52. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
53. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
54. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
55. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.

56. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

57. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

58. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

59. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

60. Mettler-Toledo Standard Terms and Conditions for Sales and Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
61. Food and Beverage Resource Guide for Commercial Food Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

62. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
63. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

64. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
65. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
66. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
67. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

14.4. Latin America

Table 253. Latin America Food Safety Testing Equipment Market, by Country growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)
Argentina	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Processing & Marketing - Food and Beverage Manufacturing

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas destination sales support the common commercial proxy; the Latin American split is assumed and excludes Mexico under the captured hierarchy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Americas revenue is a commercial destination input; the Latin American suballocation and future adoption index are modeled, not disclosed.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))

10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
19. US International Trade Administration - Chile Agricultural Sector, November 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports annual food-processing activity of USD xx.xx and describes domestic/export industrial customers. The model uses processing activity without adding food export value.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports annual food-processing activity of USD xx.xx and describes domestic/export industrial customers. The model uses processing activity without adding food export value.
20. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
21. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))

22. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
23. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))
24. Testo - Annual Press Conference, February 19, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

25. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

26. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
27. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

28. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
29. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
30. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
31. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

32. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
33. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
34. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
35. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
36. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

37. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
38. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
39. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
40. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
41. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

42. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
43. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
44. Laboratory Accreditation for Analyses of Foods (LAAF) Program & Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
45. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.

46. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
47. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
48. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
49. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
50. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.

51. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
52. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
53. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
54. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
55. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.

56. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

57. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

58. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

59. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

60. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

61. Food and Beverage Resource Guide for Commercial Food Testing Laboratories

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

62. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
63. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

64. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
65. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
66. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
67. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

14.5. Middle East

Table 264. Middle East Food Safety Testing Equipment Market, by Country growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)
Israel	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Qatar	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. **Processing & Marketing - Food and Beverage Manufacturing**

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K

- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the Middle Eastern suballocation is modeled rather than reported.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled Middle East allowance is separated; does not disclose Middle East target-market sales.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))

10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. US International Trade Administration - Turkey Agriculture, January 29, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes Turkey's formal food-processing and foodservice customer roles and a population reference of xx.xx.7m. These constrain the explicit throughput-equivalent assumption, not observed equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes Turkey's formal food-processing and foodservice customer roles and a population reference of xx.xx.7m. These constrain the explicit throughput-equivalent assumption, not observed equipment spending.
19. USDA Foreign Agricultural Service - Saudi Arabia Food Processing Ingredients, April 6, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a developing processing customer base and a cumulative broad-sector investment ambition. The model explicitly does not treat that ambition as annual food-safety equipment expenditure.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a developing processing customer base and a cumulative broad-sector investment ambition. The model explicitly does not treat that ambition as annual food-safety equipment expenditure.
20. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))

21. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
22. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))
23. Testo - Annual Press Conference, February 19, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

24. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

25. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
26. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

27. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
28. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
29. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
30. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

31. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
32. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
33. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
34. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
35. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

36. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
37. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
38. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
39. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
40. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

41. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
42. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
43. Laboratory Accreditation for Analyses of Foods (LAAF) Program & Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
44. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.

45. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
46. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
47. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
48. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
49. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.

50. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
51. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
52. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
53. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
54. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.

55. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

56. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

57. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

58. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

59. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

60. Food and Beverage Resource Guide for Commercial Food Testing Laboratories

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

61. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
62. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

63. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
64. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
65. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
66. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

14.6. Africa

Table 275. Africa Food Safety Testing Equipment Market, by Country growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)
Egypt	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Kenya	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. **Processing & Marketing - Food and Beverage Manufacturing**

   · Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.

   · Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.

   · Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K

- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Asia/Rest-of-World destination revenue constrains the proxy pool; the African suballocation is modeled rather than reported.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supports the broad laboratory destination-sales calibration from which a modeled African allowance is separated; no African food-equipment share is reported.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))

10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.
11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
19. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
20. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))

21. Testo - Annual Press Conference, February 19, 2026

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

22. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

23. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
24. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

25. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
26. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
27. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
28. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

29. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
30. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
31. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
32. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
33. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

34. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
35. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
36. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
37. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
38. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

39. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
40. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
41. Laboratory Accreditation for Analyses of Foods (LAAF) Program & Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
42. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.

43. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
44. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
45. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
46. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
47. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.

48. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
49. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
50. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
51. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
52. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.

53. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

54. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

55. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

56. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

57. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

58. Food and Beverage Resource Guide for Commercial Food Testing Laboratories

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

59. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
60. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

61. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
62. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
63. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
64. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

15. Food Safety Testing Equipment Market, by Group

Americas provides a laboratory-network lens rather than a collective purchasing authority. ■■■ ■■■■■■■■■■■■■■ ■■■■■■■ ■■ ■■■■ ■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■ ■■■■■■■■■■■■■■ ■■■■ ■■■■■■■■■ ■■■■■■■ ■■■■■■■■■■■■■■ ■■■ ■■■■■■■ ■■■ ■■■■■ ■■■■■■■■■ ■■■■■■■■ ■■■■■■■■■■■■■■ ■■■■■■■■■■■■ ■■■ ■■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■■ ■■■■ ■■■ ■■■■■■ ■■■■■■■■■ ■ ■■■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■ ■■ ■■■■■■■■■■■■■ ■■■ ■ ■■■■■■■■■■ ■■■■■■■■■■ ■■■■■ US and Brazilian acceptance relationships therefore remain distinct from network membership.

Europe, Middle East & Africa can be commercially meaningful as a supplier's service organization without becoming a common regulatory jurisdiction. ■■■■■■■■ ■■■■■■■ ■■■■■■■■■ ■■■■■■■■■ ■ ■■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■ ■■■■■■■■■■■ ■■ ■■■■ ■■ ■■■■■■■■ ■■■ ■■ ■■■■■■■■■■ ■■■■ ■■ ■ ■■■■■■■■■■ ■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■ ■■■ ■■■ ■■■■■■■■■■■ ■■■■■■■■■■■ ■■■■■■ ■■■ ■■ ■■■■■■■■ ■■■■■■■■■■■■■■ ■■ ■■■■■■ ■■■■■■■■ ■■ ■■■■■■■■ ■■■■■■■■■■■■■■■ Buyers should distinguish a regional supply infrastructure from the obligations enforceable in their own order.

■■■■■ ■■■■■■■■■■■■■ ■■■ ■■■■■■■ ■■■■■ ■■ ■■■■■■■■■■ ■■■■■■■■■■■■■■ ■■■ ■■■■■■■■ ■■■■■■■■ ■■■■■■■ ■■■■■■■■ ■ ■■■■■ ■■■ ■■■■■ ■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■■ ■■■■■■■■■ ■■■■■■■■■■ ■■■■ ■■■■■■■■■■■■■■■■■■■ ■■ ■■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■ ■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■ ■■■ ■■■■■■■■■■ ■■■■■■■ ■■■■■ ■■ ■■■■■■■ ■■■■■■■■ ■■■■■■■■■■ An equipment supplier should therefore establish the applicable national rule and recognized buyer relationship before relying on an ASEAN label. Harmonization is a potential simplification, not proof of identical local approval or service conditions.

■■■ ■■■ ■ ■■■■■■ ■■■■■■■■■■ ■■■■■■■ ■■■■■■■■■■ ■■■ ■■■■ ■■■■■■ ■■■ ■■ ■■■■■■■■ ■■■ ■ ■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■■■ ■■■ ■■■■■ ■■■■ ■■■■■ ■■■■■■■■■■ ■ ■■■■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■ ■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■■■■■■ ■■■■ ■■■■■■■■■■ ■■■■■■■■■ ■■■■■■■■■■■■ Separately, Dubai's EIAC scheme supplements ISO/IEC xx.xx for food, water, and environmental laboratories and requires compliance with applicable national and local law. Buyers should distinguish the shared food-trade framework from the laboratory recognition and equipment obligations at the actual destination; the historical guide alone does not establish uniform implementation.

Australasia illustrates the limits of a shared standards identity. Food Standards Australia New Zealand states that Chapter xx.xx food-safety standards apply to Australia only. ■■ ■■■■■■■■■■■ ■■■■■■■■■■■ ■■■■■■■■ ■■■■■■■■■■■ ■■■■■■ ■■■■■■■■■■■■ ■■■ ■■ ■■■■■■■■■■ ■■ ■ ■■■ ■■■■■■■ ■■■■■■■■ ■■■■■■■■ ■ ■■■■■ ■■■ ■■■■■■■■ ■■■■■■ ■■■■■■■■■■ ■■■ ■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■ ■■■■ ■■■■■■■■■■ ■■■ ■■■■ ■■■■■ ■■■■■■■■■■■■ ■■■■ ■■■■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■ ■■■ ■■■■■■■■■■ ■■■■■■■■■■■■■ ■■■■■■ ■■■■■■■■■■ ■■■ ■■■■■■■■■ ■■■■■■■ ■■■■■ ■■■■■■■ ■■■■■■■■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■■■■■ ■■■■■■■■

Nordic offers a basis for comparing applicable EU/EEA food-law documentation across Denmark, Finland, Sweden, Norway, and Iceland. ■■■■ ■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■

■■■ ■■■■■■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■ ■■■ ■■■■ ■■■■■ ■■■■■■■■■■■ ■■■■■■■ ■■ ■■■■■■■■■■■■ ■■■■■■■■■ ■■■■■ ■■■■■■■ ■■■■■■■■■ ■■■■■■ ■■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■ ■■■■ ■■■■■■■■ ■■■■■■■■■■■■■■■■■■ ■■■■■■■■■■■■ ■■■ ■■■■■■■ ■■■ ■■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■■■■■ ■■■ ■■■■■■■■ ■■■■■■■■■■ ■■■■■ Shared legal foundations support preparation of a common dossier, not an assumption of common procurement authority or identical implementation.

■■■■■■■■ ■■■■■ ■■■■■■■■ ■ ■■■■■■ ■■■■■■■■■■■■■■■■■■■ ■■■■■■■■■ ■■■■ ■■■■■■■■ ■■■■■■■■■■ ■■■ ■■■■■■■■■■ ■■■ ■■■■■■■■■■ ■■■■■■■■■ ■■■■■■■■ ■■ ■■■■■ ■■■■■■■■■■ ■■■■ ■■■■■■■■■■■■ ■■■ ■■■■■■■■■■■■■■■■ ■■■■■■■■■■■■■■■■ ■■ ■■■ ■■■■■■■■■ ■■■■■ ■■■■ ■■■■■■ ■■■■■■■■ ■■ ■■■ ■■■■■■■■ A Germany-to-France distribution arrangement should therefore allocate the responsible operator and destination-country obligations explicitly. Centralized equipment sourcing may simplify the commercial relationship, but does not remove national compliance work or establish that every instrument falls within the same classification.

■■■■■ ■■■■■■■■■■■ ■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■■■■■ ■■■ ■■■■ ■■■ ■■■■■■■■ ■ ■■■■■■■■■■ ■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■ ■■■■ ■■■■ ■■■■■■■■■■ ■■■■■■■■■■ ■■■ ■■■■■ ■■■■■■■■■■■■ ■■■■■■■■ ■■■■■■■■ ■■ ■ ■■■■■■■■ ■■■■■■■■ ■■■■■■■■ The equipment implications remain project-specific: Brazil uses demanded laboratory scopes and public selection, while India's notified laboratories retain accreditation and reporting obligations. Suppliers should distinguish a cooperative initiative from a funded acquisition and an accepted laboratory role before committing commercial resources.

G7 is useful for comparing acceptance arrangements, not pooling permissions. Canada incorporates CFIA-specific criteria into laboratory accreditation, while Japan distinguishes foreign laboratory reports accepted across export origins from those limited to exports from the laboratory's own country or region. ■ ■■■■■■■■■■ ■■■■■ ■■■■■■■ ■■■■■ ■■■■■■■■■■■■ ■■■ ■■■■■■■■■■■ ■■■■■■■■■ ■■■■■ ■■■■■■■■■ ■■■ ■■■■■■ ■■■■■■ ■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■■ ■■■ ■■■■■■■ ■■ ■■■■■■■■■■■■ ■■ ■■■■■ ■■■■■■■■■■■■ ■■■■■■■ ■■ ■■■ ■■■■■■ ■■■■■■■ ■■■■■■■■■■■■

NATO represents a potential institutional foodservice channel, not demonstrated equipment procurement. ■■■■■■■■ ■■■■■ ■■■■ ■■■■■■ ■■■■■■■■■■ ■■ ■■■■ ■■■■■■■■■■■■■■■■ ■■■■■ ■■■■■■ ■■■■ ■■■■■■■■ ■■■ ■■■■■■■■ ■■■■■■■■■■■■■ ■■■■ ■■■■■■■■■■ ■■■■■■■■ ■■■■ ■■■■■ ■■■ ■■■■■■■■■■ ■■ ■■■ ■■■■■■■■■■ ■■■■■■■■■ ■■■■■ ■■ ■■■■■■■■■ ■■■■■■■■ ■■■■ ■■■■■■■■■■ ■■■■■■■■ ■ ■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■ ■■ ■■■■ ■■■■ ■■ ■■ ■ ■■■■■■■■■■■■ ■■■■■■■■■■■ ■■■■■■ ■■■■■■■■ ■■■ ■■■■■■■■ ■■ ■■ ■■■■■■■■■ ■■■■■■■■■■■■ The announced event does not establish an equipment award or a contractor's buying authority.

■■■■■ ■■■■■ ■■■■■■ ■■■■■■■ ■■■■ ■■■■■■■■ ■■■ ■■■■■■■ ■■■■■■■■ ■■■ ■■■■ ■■■ ■■■■■■■■ Americas and Europe, Middle East & Africa organize broad commercial coverage; ASEAN, GCC, Australasia, Nordic, European Union, BRICS, G7, and NATO address different institutional relationships. They are non-additive analytical views, not separate markets that can be combined without reconciling the underlying geography and commercial activity.

Figure 25. Global Food Safety Testing Equipment Market Size, by Group, 2025 vs 2026 vs 2032

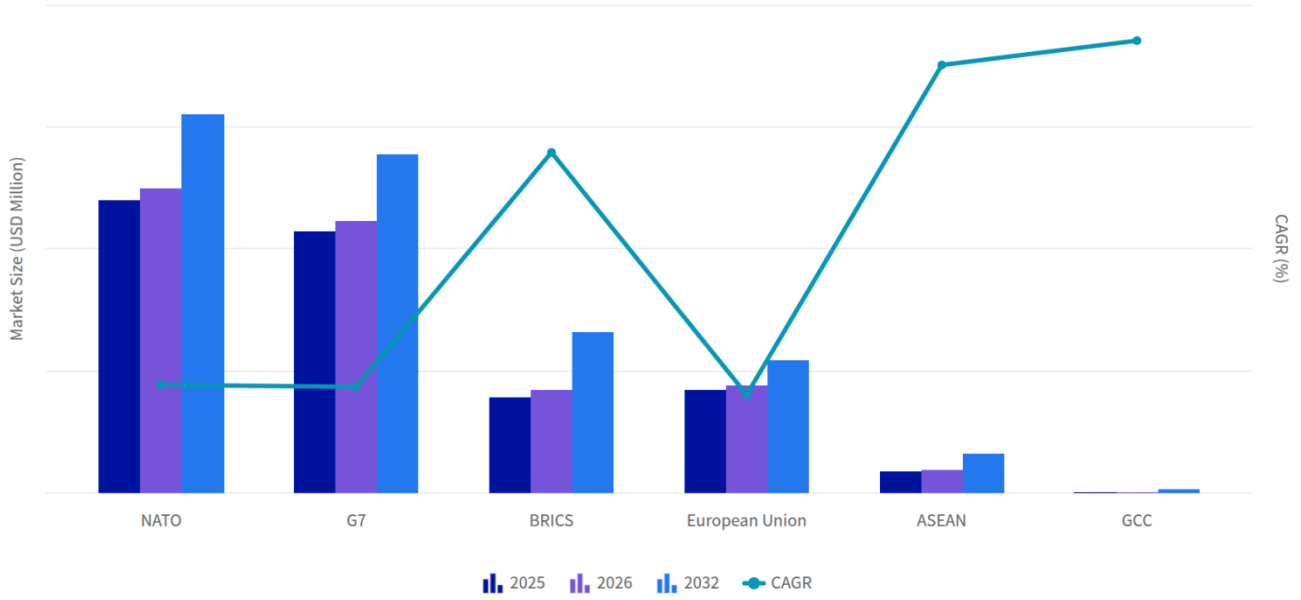

Table 286. Global Food Safety Testing Equipment Market Size, by Group, 2017-2040 (USD Million)

Group	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
ASEAN	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
BRICS	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
European Union	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
G7	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
GCC	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
NATO	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Compliance Order for All Laboratories - FSSAI, I/35118/2026

   · FSSAI's notified-laboratory obligations illustrate a national reporting and recognition relationship within the BRICS comparison. ([fssai.gov.in](https://www.fssai.gov.in/upload/advisories/2026/xx.xx/699855f2b69d3Compliance%20Order%20for%20All%20Laboratories.pdf))

2. WEEE Responsibilities

   · Your Europe describes registration and waste-management responsibilities for producers of covered electrical and electronic equipment, with destination-country arrangements. Specific instrument classification remains a prerequisite. ([europa.eu](https://europa.eu/youreurope/business/product-rules-compliance/recycling-waste-management/weee-responsibilities/index_en.htm))

3. Accreditation Requirements for Food & Environmental Laboratories - EIAC

   · EIAC's scheme supplements ISO/IEC xx.xx and requires applicable national and local legal compliance, supporting a distinction between shared GCC guidance and local laboratory obligations. ([eiac.gov.ae](https://eiac.gov.ae/wp-content/uploads/2025/xx.xx/EIAC-RQ-LB-xx.xx-Accreditation-Requirements-for-Food-Environmental-Laboratories.pdf))

4. CFIA Framework for Quality Management Oversight of Laboratories Conducting Testing in Areas Under the CFIA Mandate

   · Canadian food-laboratory accreditation arrangements incorporate CFIA criteria, supporting destination-specific acceptance scopes in the G7 comparison. ([inspection.canada.ca](https://inspection.canada.ca/en/food-safety-industry/food-chemistry-and-microbiology/laboratory-management/qmof))

5. Laboratórios Credenciados - Ministério da Agricultura e Pecuária

   · Brazil's demanded scopes and public selection illustrate a national institutional gate within the BRICS comparison. ([gov.br](https://www.gov.br/agricultura/pt-br/assuntos/defesa-agropecuaria/laboratorios-credenciados/laboratorio-credenciado))

6. Foreign Official Laboratories - Ministry of Health, Labour and Welfare

   · The Japanese register distinguishes acceptance across export origins from acceptance limited to exports from the laboratory's own country or region. ([mhlw.go.jp](https://www.mhlw.go.jp/stf/seisakunitsuite/bunya/kenkou_iryou/shokuhin/yunyu_kanshi/index_00019.html))

7. Member Countries - Inter-American Network of Food Analysis Laboratories

   · INFAL comprises officially nominated national laboratories and describes country participation as voluntary. Its roster supports institutional discovery rather than collective procurement or automatic customer acceptance. ([rilaa.net](https://www.rilaa.net/en/paises-miembros))

8. Corporate Policies - Ishida

   · Ishida's Brexit statement describes a Netherlands distribution center established in 2020 and commitments directed to EU customers. It does not establish identical undertakings throughout EMEA. ([ishidaeurope.com](https://www.ishidaeurope.com/en/about-us/corporate/corporate-policies/))

9. Harmonisation of Standards in ASEAN

   · The ASEAN Trade Repository distinguishes categories of harmonized standards and advises confirmation of national adoption. This supports a conditional rather than automatic access simplification. ([atr.asean.org](https://atr.asean.org/read/harmonisation-of-standards-in-asean/xx.xx/))

10. GCC Guide for Control on Imported Foods

    · The GCC's 2015 guide describes an integrated, risk-based import-control direction while retaining competent national authorities. It is a historical food-trade reference, not evidence of one current instrument authorization. ([gcc-sg.org](https://gcc-sg.org/en/MediaCenter/DigitalLibrary/Documents/xx.xx.pdf))

11. Food Safety Standards - Chapter 3

    · FSANZ states that Chapter xx.xx food-safety standards apply to Australia only, supporting separate national applicability checks within Australasia. ([foodstandards.gov.au](https://www.foodstandards.gov.au/business/food-safety-standards))

12. Agriculture, Fisheries and Food Safety - European Free Trade Association

    · EFTA describes harmonized food-safety and official-control requirements under the EEA and identifies limits, including the absence of fully harmonized plant-health legislation. ([efta.int](https://www.efta.int/eea-relations-eu/policy-areas/free-movement-goods/agriculture-fisheries-and-food-safety))

13. Agricultural Research and Technology Collaboration Within BRICS Framework

    · India's July xx.xx 2025 government disclosure describes the BRICS Agricultural Research Platform as a virtual network supporting institutional cooperation. It does not establish an equipment order or common laboratory permission. ([pib.gov.in](https://www.pib.gov.in/PressReleasePage.aspx?PRID=xx.xx&lang=xx.xx®=xx.xx))

14. Konferencja NSPA - Dzień Branży Żywnościowej

    · Poland's April xx.xx 2026 notice advertised an NSPA pre-solicitation foodservices event and supplier-registration opportunity. It establishes announced engagement, not completed equipment procurement. ([gov.pl](https://www.gov.pl/web/rozwoj-technologia/konferencja-nspa---dni-branzy-zywnoscioweh))

15. Procurement Opportunities - NATO
    - NATO states that the respective procuring body evaluates bids case by case. This supports identifying the actual purchasing authority rather than treating NATO membership as equipment access. ([nato.int](https://www.nato.int/en/work-with-us/business-and-project-opportunities/procurement-opportunities))
16. Processing & Marketing - Food and Beverage Manufacturing
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
17. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
18. Mettler-Toledo International Inc. - 2025 Form 10-K
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
19. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
    - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
    - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
    - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
    - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
    - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
    - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.

20. Agilent Technologies - 2017 Annual Report
- Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

21. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
- Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
- Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
- Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

22. Agilent Technologies - Fiscal 2025 Annual Report
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.

23. Agilent Technologies - Q1 2025 Results Presentation
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

24. Waters Corporation - 2025 Annual Report
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.

25. Thermo Fisher Scientific Inc. - 2025 Form 10-K
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.

26. bioMérieux - 2025 Financial Results
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.

27. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.
28. Testo - Annual Press Conference, January 23, 2025
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
29. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
30. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
31. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
32. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.

15.1. NATO

Table 287. NATO Food Safety Testing Equipment Market, by Country growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)

Sources & Evidence

1. Processing & Marketing - Food and Beverage Manufacturing

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K

- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.

11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.

19. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: National food/drink turnover and value added constrain the activity score; no equipment percentage is directly reported.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: National food/drink turnover and value added constrain the activity score; no equipment percentage is directly reported.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Bulgarian turnover/value-added inputs for the shared commercial activity model.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Bulgarian turnover/value-added inputs for the shared commercial activity model.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Croatian turnover/value-added inputs for the shared commercial activity model.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Croatian turnover/value-added inputs for the shared commercial activity model.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Czech food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Czech food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Danish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Danish food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Estonian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Estonian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Finnish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Finnish food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Greek food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Greek food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Hungarian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Hungarian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Latvian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Latvian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Lithuanian food-industry turnover/value-added inputs.

20. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
21. US International Trade Administration - Turkey Agriculture, January 29, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes Turkey's formal food-processing and foodservice customer roles and a population reference of xx.xx.7m. These constrain the explicit throughput-equivalent assumption, not observed equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes Turkey's formal food-processing and foodservice customer roles and a population reference of xx.xx.7m. These constrain the explicit throughput-equivalent assumption, not observed equipment spending.
22. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
23. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
24. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))

25. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
26. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))
27. Testo - Annual Press Conference, February 19, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

28. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

29. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
30. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

31. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
32. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
33. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
34. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

35. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
36. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
37. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
38. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
39. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

40. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
41. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
42. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
43. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
44. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

45. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
46. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
47. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
48. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.

49. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
50. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
51. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
52. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
53. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.

54. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
55. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
56. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
57. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
58. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

59. Frequently Asked Questions - Wholesale - U.S. Census Bureau

· Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

· Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

· Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

· Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

· Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

· Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

60. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

· Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

· Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

· Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

· Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

· Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

· Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

61. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

62. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

63. Food and Beverage Resource Guide for Commercial Food Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

64. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
65. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

66. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
67. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
68. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
69. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

15.2. G7

Table 298. G7 Food Safety Testing Equipment Market, by Country growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)
Canada	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
France	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Processing & Marketing - Food and Beverage Manufacturing

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.

11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
19. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
20. Defra - Food statistics in your pocket, manufacturing businesses
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
21. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
22. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.

23. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
24. Japan Ministry of Health, Labour and Welfare - Foreign Official Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
25. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))

26. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
27. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))
28. Testo - Annual Press Conference, February 19, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

29. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

30. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
31. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

32. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
33. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
34. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
35. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

36. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
37. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
38. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
39. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
40. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

41. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
42. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
43. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
44. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
45. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

46. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
47. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
48. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
49. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.

50. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
51. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
52. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
53. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
54. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.

55. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
56. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
57. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
58. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
59. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

60. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

61. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

62. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

63. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

64. Food and Beverage Resource Guide for Commercial Food Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

65. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
66. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

67. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
68. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
69. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
70. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

15.3. European Union

Table 309. European Union Food Safety Testing Equipment Market, by Country growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)
Austria	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Belgium	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Processing & Marketing - Food and Beverage Manufacturing

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.

11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: 2023 national turnover and value added support the modeled score xx.xx*T+xx.xx*VA and its forecast starting weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: 2023 national turnover and value added support the modeled score xx.xx*T+xx.xx*VA and its forecast starting weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: National food/drink turnover and value added constrain the activity score; no equipment percentage is directly reported.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: National food/drink turnover and value added constrain the activity score; no equipment percentage is directly reported.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Bulgarian turnover/value-added inputs for the shared commercial activity model.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Bulgarian turnover/value-added inputs for the shared commercial activity model.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Croatian turnover/value-added inputs for the shared commercial activity model.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Croatian turnover/value-added inputs for the shared commercial activity model.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Cypriot turnover/value-added inputs, not a local equipment-sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Cypriot turnover/value-added inputs, not a local equipment-sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Czech food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Czech food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Danish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Danish food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Estonian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Estonian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Finnish food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Finnish food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Greek food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Greek food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Hungarian food-industry turnover/value-added inputs.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Hungarian food-industry turnover/value-added inputs.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Irish food-industry turnover/value-added inputs.

19. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
20. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
21. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))

22. Testo - Annual Press Conference, February 19, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
23. Digital Food Safety Management with testo Saveris Food
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

24. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
25. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

26. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
27. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
28. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
29. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

30. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
31. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
32. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
33. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
34. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

35. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
36. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
37. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
38. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
39. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

40. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
41. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
42. Laboratory Accreditation for Analyses of Foods (LAAF) Program & Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
43. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.

44. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
45. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
46. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
47. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
48. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.

49. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
50. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
51. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
52. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
53. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.

54. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

55. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

56. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

57. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

58. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

59. Food and Beverage Resource Guide for Commercial Food Testing Laboratories

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

60. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
61. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

62. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
63. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
64. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
65. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

15.4. BRICS

Table 320. BRICS Food Safety Testing Equipment Market, by Country growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)
Brazil	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
China	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
India	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Processing & Marketing - Food and Beverage Manufacturing

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.

11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
19. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
20. Brazil Ministry of Agriculture - Accredited Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
21. SAMR - Frequently asked questions on the inspection and testing institution one-list, one-database framework
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
22. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))

23. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
24. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))
25. Testo - Annual Press Conference, February 19, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

26. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

27. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
28. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

29. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
30. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
31. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
32. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

33. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
34. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
35. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
36. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
37. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

38. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
39. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
40. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
41. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
42. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

43. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
44. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
45. Laboratory Accreditation for Analyses of Foods (LAAF) Program & Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
46. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.

47. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
48. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
49. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
50. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
51. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.

52. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
53. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
54. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
55. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
56. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.

57. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

58. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

59. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

60. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

61. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

62. Food and Beverage Resource Guide for Commercial Food Testing Laboratories

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

63. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
64. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

65. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
66. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
67. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
68. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

15.5. ASEAN

Table 331. ASEAN Food Safety Testing Equipment Market, by Country growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)
Brunei	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Cambodia	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Indonesia	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Lao People's Democratic Republic	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx

Sources & Evidence

1. Processing & Marketing - Food and Beverage Manufacturing

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K

- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.

11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
19. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
20. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))

21. Testo - Annual Press Conference, February 19, 2026

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

22. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

23. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
24. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

25. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
26. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
27. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
28. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

29. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
30. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
31. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
32. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
33. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

34. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
35. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
36. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
37. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
38. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

39. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
40. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
41. Laboratory Accreditation for Analyses of Foods (LAAF) Program & Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
42. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.

43. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
44. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
45. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
46. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
47. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.

48. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
49. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
50. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
51. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
52. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.

53. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

54. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

55. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

56. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

57. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

58. Food and Beverage Resource Guide for Commercial Food Testing Laboratories

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

59. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
60. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

61. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
62. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
63. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
64. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

15.6. GCC

Table 342. GCC Food Safety Testing Equipment Market, by Country growth contribution, 2025-2032

Category	2025 value (USD Million)	2032 value (USD Million)	Added value (USD Million)	2025 share (%)	2032 share (%)	Change (pp)	Growth share (%)	CAGR (%)

Sources & Evidence

1. Processing & Marketing - Food and Beverage Manufacturing

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.

11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. USDA Foreign Agricultural Service - Saudi Arabia Food Processing Ingredients, April 6, 2023
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a developing processing customer base and a cumulative broad-sector investment ambition. The model explicitly does not treat that ambition as annual food-safety equipment expenditure.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a developing processing customer base and a cumulative broad-sector investment ambition. The model explicitly does not treat that ambition as annual food-safety equipment expenditure.
19. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
20. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
21. PR18666 - 39903-251283 Percival Incubators - Contract History
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))

22. Testo - Annual Press Conference, February 19, 2026

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

23. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

24. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
25. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

26. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
27. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
28. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
29. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

30. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
31. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
32. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
33. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
34. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

35. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
36. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
37. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
38. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
39. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

40. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
41. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
42. Laboratory Accreditation for Analyses of Foods (LAAF) Program & Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
43. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.

44. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
45. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
46. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
47. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
48. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.

49. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
50. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
51. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
52. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
53. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.

54. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

55. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence.
([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

56. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation.
([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

57. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales.
([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

58. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

59. Food and Beverage Resource Guide for Commercial Food Testing Laboratories

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

60. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
61. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

62. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
63. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
64. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
65. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

16. Food Safety Testing Equipment Market, by Country

In the United States, retail and foodservice equipment claims require attention to the adopting jurisdiction. ▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪ ▪▪ ▪ ▪▪▪▪▪ ▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪ ▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪▪▪▪ A vendor's reference to the FDA model does not independently establish acceptance at every site.

▪▪▪▪▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪ ▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ A laboratory considering additional equipment for official work should establish whether the intended activity is included in the applicable accreditation opportunity before committing. Commercially useful equipment can serve other accepted work, but acquisition alone does not secure an expanded official role.

▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪ ▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪ ▪▪▪ ▪▪▪ ▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪ A proposed food-testing service should be assessed against its actual applicable scope. Neither a blanket CMA requirement nor a blanket exemption is an adequate basis for an equipment commitment.

India adds a prescribed reporting deliverable to the institutional buying decision. FSSAI's February xx.xx 2026 order directs notified laboratories to remain within NABL accreditation scope, use prescribed report formats, and upload reports to InFoLNet without delay. ▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪ ▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪

Japan can place equipment-related activity outside the importing country when accepted foreign laboratory reports satisfy the relevant requirement. MHLW's register distinguishes laboratories with different export-origin coverage. ▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪ ▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪

▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪ ▪▪▪ ▪▪▪▪▪▪▪▪▪ ▪▪▪▪▪▪▪▪▪▪▪▪▪▪▪ This creates a bounded role for monitoring and records equipment where it supports the applicable evidence obligation, not a requirement for every business to purchase the same

connected system. Buyers should identify their category and accepted documentation arrangement before selecting hardware or associated subscriptions.

Singapore's documented private-laboratory model separates the food business needing evidence from the organization operating equipment. ■■■■■ ■■■■■■■ ■■■■ ■■■■■■■ ■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■■■■■ ■■■■■■■■■■ ■■■■■■■■ ■■■ ■■■■■■■■■■ ■■■■■■■ ■■■■■■ ■■■■■■■■■ ■■■■■■■■■ ■■■■■■ ■■■■■■■■ ■■■ ■■■■■■■■■■ ■■■■■■ ■■■ ■■■■■■■■■■■ ■■■■■■■■ ■■■■■■ ■■■■ ■■■■■■ ■■■ ■■■■ ■■■■■■ ■■ ■■■ ■■■■■■ For an individual transaction, recognition scope, service availability, and the actual purchase authorization must still be established.

Sources & Evidence

1. Ramping Up Singapore's Food Testing Capabilities
   · The Singapore account identifies private laboratory services for industry and regulatory needs, supporting separation of the evidence customer from the equipment operator. ([sfa.gov.sg](https://www.sfa.gov.sg/food-for-thought/article/detail/ramping-up-singapore%27s-food-testing-capabilities))
2. Compliance Order for All Laboratories - FSSAI, I/35118/2026
   · FSSAI's February xx.xx 2026 order requires notified laboratories to stay within NABL accreditation scope, follow prescribed report formats, and upload reports to InFoLNet without delay. Equipment connectivity does not independently discharge these obligations. ([fssai.gov.in](https://www.fssai.gov.in/upload/advisories/2026/xx.xx/699855f2b69d3Compliance%20Order%20for%20All%20Laboratories.pdf))
3. FDA Food Code
   · FDA describes the Food Code as a model for regulatory jurisdictions developing retail and foodservice rules. A model reference does not independently establish identical local applicability. ([fda.gov](https://www.fda.gov/food/retail-food-protection/fda-food-code))

4. Laboratórios Credenciados - Ministério da Agricultura e Pecuária
   - MAPA limits accreditation to demanded reference activities and uses public selection, supporting recognition verification before equipment commitment for official-scope expansion. ([gov.br](https://www.gov.br/agricultura/pt-br/assuntos/defesa-agropecuaria/laboratorios-credenciados/laboratorio-credenciado))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes accredited third-party laboratories and demanded activities, constraining the model against equating industrial processing growth or equipment acquisition with expanded official recognition.
5. Foreign Official Laboratories - Ministry of Health, Labour and Welfare
   - The register provides distinct coverage categories that an exporter must match to its chosen laboratory relationship. ([mhlw.go.jp](https://www.mhlw.go.jp/stf/seisakunitsuite/bunya/kenkou_iryou/shokuhin/yunyu_kanshi/index_00019.html))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists foreign laboratories with differing accepted-report coverage. It supports retaining buyer/equipment location rather than attributing all associated equipment to Japan's food-import destination.
6. 检验检测机构资质认定“一单一库”常见问题解答 - SAMR
   - SAMR's May xx.xx 2026 guidance explains the framework effective June xx.xx 2026, including activities outside CMA requirements, restrictions on CMA marking, separate statutory qualifications, and transitional contracts. The proposed food-testing activity still requires a scope check. ([samr.gov.cn](https://www.samr.gov.cn/rzjgs/xczl/art/2026/art_b1a54b8398da4f03a910ad0f8c1c2afb.html))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: May xx.xx 2026 guidance describes the scope-specific framework effective June xx.xx 2026. The model applies no blanket CMA-driven equipment uplift.
7. Foreign Official Laboratories - Acceptance Guidance
   - MHLW's foreign-laboratory guidance describes accepted foreign results and excludes items whose sanitary condition can change during transport, including bacteria and mycotoxins. It supports a bounded offshore fulfillment choice. ([mhlw.go.jp](https://www.mhlw.go.jp/english/topics/importedfoods/dl/xx.xx-xx.xx.pdf))
8. Standard 3.2.2A - Food Safety Management Tools
   - FSANZ describes Standard xx.xx.2A as applying to specified Australian foodservice, catering, and retail activities, with category-dependent supervision, training, and evidence requirements. It does not prescribe a universal connected-equipment purchase. ([foodstandards.gov.au](https://www.foodstandards.gov.au/business/food-safety/overview-food-safety-management-tools))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes category-dependent foodservice, catering and retail obligations. It constrains the forecast against a universal connected-hardware acquisition assumption.

9. Processing & Marketing - Food and Beverage Manufacturing
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
10. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
11. Mettler-Toledo International Inc. - 2025 Form 10-K
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
12. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
    - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
    - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
    - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
    - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
    - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
    - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
    - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
    - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.

13. Agilent Technologies - 2017 Annual Report
- Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

14. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
- Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
- Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
- Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.

15. Agilent Technologies - Fiscal 2025 Annual Report
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.

16. Agilent Technologies - Q1 2025 Results Presentation
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.

17. Waters Corporation - 2025 Annual Report
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.

18. Thermo Fisher Scientific Inc. - 2025 Form 10-K
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.

19. bioMérieux - 2025 Financial Results
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.

20. Neogen Corporation - Fiscal 2025 Annual Report
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

21. Testo - Annual Press Conference, January 23, 2025
- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.

22. Anritsu Integrated Report 2025
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.

23. Eurofins Scientific - FY 2025 Results Presentation
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.

24. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.

25. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
- Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
- Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.

26. USDA Foreign Agricultural Service - Canada Food Processing Ingredients Annual, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes approximately xx.xx Canadian food/beverage processing establishments, constraining the customer-pool proxy. Mean activity, equipment intensity and forecast change remain modeled.

27. USDA Mexico - Food Processing Ingredients Annual, April 3, 2025
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports food processing as xx.xx% of Mexico's GDP in 2024. Applying that sector-specific composition to captured 2025 GDP and an explicit equipment-intensity adjustment creates the modeled activity score.

28. USDA Foreign Agricultural Service - Brazil Food Processing Ingredients Annual, March 31, 2026
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 food-processing revenue of USD xx.xx attributed to ABIA. It anchors the food-industry activity proxy, not equipment-market revenue or a future share.

29. FoodDrinkEurope Data & Trends - National food and drink industry statistics, 2023
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides French food-industry turnover/value-added inputs.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides German food-industry turnover/value-added inputs.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Italian food-industry turnover/value-added inputs.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Provides Spanish food-industry turnover/value-added inputs.

30. Defra - Food statistics in your pocket, manufacturing businesses
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official 2025 employer food/drink manufacturer counts constrain the UK commercial buyer scale; they do not verify the assumed equipment-activity score.

31. USDA Foreign Agricultural Service - China Food Processing Ingredients Annual, April 1, 2026
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Attributes 2025 food/agricultural processing revenue and approximately xx.xx registered companies to Chinese public authorities. Broad sector coverage requires the disclosed modeled scope and equipment-intensity reductions.

32. USDA Foreign Agricultural Service - Japan Food Processing Ingredients Annual, April 1, 2026
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports about USD xx.xx of 2025 food processing and a xx.xx% contraction. This anchors the industrial activity score and challenges an unconditional purchasing-surge assumption.

33. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
34. CFIA - Framework for Quality Management Oversight of Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes separate Canadian laboratory oversight and recognition arrangements; no quantitative equipment-acquisition effect is inferred.

16.1. United States

Sources & Evidence

1. Processing & Marketing - Food and Beverage Manufacturing

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports xx.xx US food and beverage manufacturing establishments in 2022. This constrains the scale of the industrial customer universe but is not a global equipment-purchasing census.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food/beverage manufacturing establishments in 2022, constraining the industrial equipment customer universe used in the national working score.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial purchaser scale without establishing global equipped-site counts.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx US food and beverage manufacturing establishments in 2022; constrains industrial customer scale, not global equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Dairy represented xx.xx% of 2021 US manufacturing sales in this broader food-and-beverage dataset; used only as regional activity calibration.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Grain and oilseeds represented xx.xx% of sales; this combined category requires an explicit oils-versus-cereals crosswalk.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The combined grain/oilseed activity anchor does not measure bakery equipment spending; category coverage and equipment intensity remain modeled.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Meat processing represented xx.xx% of sales, including slaughter, processing and rendering; broader scope prevents direct copying into equipment share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Beverages represented xx.xx% of sales; provides a regional activity anchor rather than an equipment-market observation.

2. Review of Allergen Analytical Testing Methodologies: Measurement Parameters and Sensitivity of Methods

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separates hardware investment from consumables, testing fees, maintenance and other laboratory costs.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports quote-based hardware costs of approximately GBP xx.xx for ELISA instrumentation, GBP xx.xx for PCR hardware and upwards of GBP xx.xx for mass-spectrometry hardware. These constrain equipment-cost tiers, not global average selling prices.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The cost comparison assumes existing common preparation assets, supporting separate equipment accounting and a conditional reuse premise rather than automatic whole-laboratory replacement.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Existing incubation assets are distinguished from additional analytical hardware investment; this supports modular purchasing, not a measured incubation sales weight.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based hardware tiers of approximately GBP xx.xx GBP xx.xx and upwards of GBP xx.xx constrain reader-versus-capital-instrument valuation; they are not global 2025 average prices. ([science.food.gov.uk](https://science.food.gov.uk/article/xx.xx.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Quote-based mass-spectrometry hardware investment constrains relative capital intensity; it is not a global ASP or platform-sales observation. Used as a base-model and forecast valuation premise.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PCR hardware is costed separately from consumables and testing fees, supporting the molecular equipment-only valuation bridge.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The PCR hardware-cost tier informs relative equipment values; application-specific method counts are not used as sales weights.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: ELISA instrumentation provides a lower-cost reader reference for the broader affinity/biochemical model, without measuring its non-immunological portion.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Quote-based PCR hardware cost of approximately GBP xx.xx provides a reader/platform capital-intensity reference, not a global microbiological equipment ASP or sales share.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximate hardware costs of GBP xx.xx for ELISA, GBP xx.xx for PCR and upwards of GBP xx.xx for mass spectrometry; these constrain relative equipment-value tiers.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: The capital-intensive mass-spectrometry reference supports distinguishing high-value analytical portfolios from

3. Mettler-Toledo International Inc. - 2025 Form 10-K
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 product sales of USD xx.xx and service revenue of USD xx.xx across all applications; supports separating equipment from service revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 product sales of USD xx.xx service revenue of USD xx.xx and total sales of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Describes food-contaminant inspection alongside weighing, pharmaceutical and other applications, requiring food-safety and equipment-only adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 product sales of USD xx.xx separately from services, enabling an equipment-only supplier scale check with explicitly modeled food and safety adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes contaminant inspection from broader weighing and quality applications and reports stronger 2025 inspection growth than laboratory growth; this supports forecast direction, not the exact future share. ([sec.gov](https://www.sec.gov/Archives/edgar/data/xx.xx/xx.xx/mtd-xx.xx.htm))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes camera-based package and label inspection from weighing and other applications, requiring safety-only optical attribution.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies contamination X-ray systems separately from quality-only uses and reports strong 2025 product-inspection growth; this supports scope and forecast direction, not technology share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies metal-detection equipment as a distinct contaminant-inspection offering within a mixed-scope inspection business.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports USD xx.xx.805m of 2025 product sales and distinguishes services. The inspection portfolio includes contaminant detection and quality-only applications; food and safety eligibility remain modeled adjustments.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes inspection technologies integrated with material handling and use in packaging lines. Reports 2025 corporate sales of USD xx.xx; this is a broad scale-check input, not food-safety or deployment-specific revenue.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates product and service revenue and describes capital-spending sensitivity, supporting equipment-only attribution and caution against treating a supported installation package as hardware value.

4. Mettler-Toledo International Inc. - January 2026 Healthcare Conference Presentation
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Historical company-wide sales of USD xx.xx provide an instrument-industry cycle reference, not an exact-market observation.
   - Evidence informing the 2018 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% constrains the pre-pandemic expansion assumption.
   - Evidence informing the 2019 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides a moderating cycle reference.
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% provides counterevidence to assuming that every food-related equipment function contracted during 2020.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: Historical company-wide reported USD sales growth of xx.xx% supports a strong reopening and delivery-recovery period, with a smaller increase assumed for the target market.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Historical local-currency growth of xx.xx% and reported USD growth of xx.xx% demonstrate the importance of currency translation when calibrating nominal historical growth.
   - Evidence informing the 2023 market-value input; displayed series and growth include calculations: Company-wide reported USD sales declined xx.xx%, supporting a capital-equipment normalization counterforce.
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Company-wide reported USD sales increased xx.xx%, providing a broad reference alongside weaker analytical-instrument purchasing.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Management's approximate 2025 sales mix assigns xx.xx% to product inspection and xx.xx% to food manufacturers. These are company mix estimates, not target-market shares.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates Product Inspection at approximately xx.xx% of 2025 company sales. This is a mixed-scope supplier business mix, not a target-market share. ([s202.q4cdn.com](https://s202.q4cdn.com/xx.xx/files/doc_presentations/2026/Jan/xx.xx/JPMorgan-2026-Healthcare-Conference-Presentation-FINAL.pdf))
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimated product inspection at approximately xx.xx% of 2025 company sales. This constrains supplier scale after explicit hardware, food and safety adjustments; it is not a global market share.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Management estimates product inspection at approximately xx.xx% of 2025 company sales. The model applies explicit equipment, food and safety adjustments for a bounded supplier scale check; this is not a global integrated-equipment share.
5. Agilent Technologies - 2017 Annual Report
   - Evidence informing the 2017 market-value input; displayed series and growth include calculations: Reports xx.xx% growth in the life sciences and applied markets business in 2017 and describes strong food-market growth; supports the direction of the early historical bridge without measuring equipment-only food-safety revenue.

6. Agilent Technologies - Fourth Quarter Fiscal 2021 Prepared Remarks
   - Evidence informing the 2020 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2020, challenging a blanket pandemic contraction assumption for laboratory equipment.
   - Evidence informing the 2021 market-value input; displayed series and growth include calculations: States that Agilent's food business grew xx.xx% in fiscal 2021; used to calibrate, rather than directly copy, the laboratory recovery assumption.
   - Evidence informing the 2022 market-value input; displayed series and growth include calculations: Describes strong entering backlog and logistics and inflation pressures, supporting a delivery-and-price bridge rather than assuming that all revenue growth represented new underlying testing demand.
7. Agilent Technologies - Fiscal 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Describes a significant 2024 decline in the Applied Markets food business, including weaker chromatography-mass-spectrometry and spectroscopy demand.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports fiscal 2025 revenue of USD xx.xx and describes renewed food-market growth.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The disclosed business includes services, consumables, software, quality applications and remarketed instruments; explicit exclusions are required before using it as a new-equipment sales proxy.
8. Agilent Technologies - Q1 2025 Results Presentation
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports food as xx.xx% of first-quarter fiscal 2025 revenue and instruments as xx.xx% of company revenue.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The model treats the food percentage as a full-year proxy and assumes a higher equipment mix within food; neither adjustment is presented as a disclosed annual food-equipment figure.
9. Waters Corporation - 2025 Annual Report
   - Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx down xx.xx%, providing a hardware-specific capital-cycle reference.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Waters instrument-system sales of USD xx.xx up xx.xx%, separately from chemistry consumables and services.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Food-safety attribution remains modeled because food is included within a broader industrial customer category.
   - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
   - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx sales offices and approximately xx.xx field representatives in 2025. These constrain the plausibility of direct analytical-equipment coverage but are not revenue-share weights. ([s205.q4cdn.com](https://s205.q4cdn.com/xx.xx/files/doc_financials/2025/ar/Waters-2025-Annual-Report.pdf))
10. Thermo Fisher Scientific Inc. - 2025 Form 10-K
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 chromatography and mass-spectrometry revenue of USD xx.xx.
   - Evidence informing the 2025 market-value input; displayed series and growth include calculations: This broader business includes non-food applications and supporting revenue; equipment, food and safety adjustments are explicit modeled inputs.

11. bioMérieux - 2025 Financial Results
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports 2025 Industrial Applications sales of EUR xx.xx.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports group equipment sales of EUR xx.xx, equipment rentals of EUR xx.xx, reagents and services. The model excludes rental and non-equipment revenue and estimates the industrial food-equipment split.
12. Neogen Corporation - Fiscal 2025 Annual Report
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports Food Safety segment revenue of USD xx.xx for the fiscal year ended May xx.xx 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: The segment includes kits, media, services and other activities; an equipment-only and human-food attribution is modeled rather than treating the segment total as equipment sales.

13. Testo - Annual Press Conference, January 23, 2025

- Evidence informing the 2023 market-value input; displayed series and growth include calculations: Reports 2023 group turnover growth of xx.xx%, providing a broad monitoring-supplier cycle reference.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports 2024 group revenue of EUR xx.xx, up xx.xx%; Instrumentation represented xx.xx% and Solutions represented xx.xx%.
- Evidence informing the 2024 market-value input; displayed series and growth include calculations: Reports EUR xx.xx of industrial-services revenue and a slight decline in Solutions, demonstrating why group growth and connected offerings cannot be equated with food-monitoring hardware growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides the prior-year operating and revenue mix used for an explicitly assumed xx.xx% calendar-2025 bridge and food-hardware scope adjustment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx, with Instrumentation at xx.xx% and Solutions at xx.xx%; Solutions declined slightly. These mixed-scope observations constrain equipment attribution and challenge automatic connected-hardware growth. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-testo-verzeichnet-wachstum))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 group revenue of EUR xx.xx.5m, a xx.xx% Instrumentation mix, xx.xx% Instrumentation growth and an xx.xx% Solutions mix with slight decline. Separately reported services prevent treating broad group or connected-solutions revenue as food-monitoring hardware.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports a slight 2024 Solutions revenue decline alongside geographically uneven performance; qualifies assumptions of universal connected-equipment adoption.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports nearly EUR xx.xx of Spanish growth associated with McDonald's in 2024, but not a global foodservice hardware growth rate.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2024 business mix of xx.xx% Instrumentation and xx.xx% Solutions, used only after explicit food, hardware and within-business deployment assumptions to calibrate light-commercial monitoring.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Solutions declined slightly in 2024, providing counterevidence to an aggressive connected-hardware adoption assumption. The business categories do not themselves measure fixed deployment.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2024 Instrumentation at xx.xx% and Solutions at xx.xx% of group revenue, with a slight Solutions decline. These are product-business observations used to challenge an automatic enterprise/direct-channel uplift, not channel weights. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2025-

14. Anritsu Integrated Report 2025

- Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports PQA revenue of JPY xx.xx for the fiscal year ended March 2025, with xx.xx% growth.
- Evidence informing the 2025 market-value input; displayed series and growth include calculations: PQA includes food and pharmaceutical inspection, weighing and maintenance; it provides a mixed-scope scale and growth check, not calendar-2025 food-contaminant equipment sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: PQA revenue increased xx.xx% to JPY xx.xx, with reported overseas X-ray demand. Mixed food/pharmaceutical and equipment/service scope prevents treating this as target-category revenue.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reported metal-detector demand in selected markets provides counterevidence to assuming complete displacement by X-ray inspection.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports engagement with Asian PQA distributors during the fiscal year ended March 2025. This is a commercial counterforce to automatic disintermediation, not a calendar-2025 distribution percentage. ([dl.cdn-anritsu.com](https://dl.cdn-anritsu.com/en-en/about-anritsu/ir/annual-report/2025/ar2025e.pdf))

15. Eurofins Scientific - FY 2025 Results Presentation
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Reports leasehold improvements, machinery, laboratory equipment and other capital expenditure declining from EUR xx.xx in 2024 to EUR xx.xx in 2025.
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Separately reports IT and real-estate expenditure. The broader capital-expenditure total is not treated as food-safety equipment purchases.
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: Provides an observed capital-intensity counterforce to the forecast: testing-network expansion and growth need not produce proportionate new-equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Declining mixed laboratory-related capital expenditure provides a purchasing-restraint counterforce for the common laboratory forecast, not a sampling-specific growth observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The broader buyer expenditure series constrains assumptions about laboratory expansion automatically requiring new supporting equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Continued network investment alongside lower mixed equipment-related expenditure supports retaining a capital-intensity restraint, without measuring incubation purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Leasehold improvements, machinery, laboratory equipment and other capex declined from EUR xx.xx in 2024 to EUR xx.xx in 2025; food-only instrument spending is not separately identified. ([cdnmedia.eurofins.com](https://cdnmedia.eurofins.com/corporate-eurofins/media/x0jkreyr/eurofins-scientific-2025-full-year-results-presentation.pdf))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Mixed leasehold, machinery, laboratory-equipment and other capex fell from EUR xx.xx in 2024 to EUR xx.xx in 2025; constrains outsourcing-related hardware-growth assumptions.
16. Federal Reserve - Foreign Exchange Rates, G.5A Annual, January 5, 2026
    - Evidence informing the 2025 market-value input; displayed series and growth include calculations: Provides 2025 average exchange rates of USD xx.xx per EUR and JPY xx.xx per USD for converting financial cross-check inputs.
17. FDA - FSMA Final Rule on Pre-Harvest Agricultural Water
    - Evidence informing the 2026 market-value input; displayed series and growth include calculations: The risk-based agricultural-water framework does not provide equipment-purchase quantities. It constrains the model against converting a compliance milestone directly into equipment sales.
    - Evidence informing the 2027 market-value input; displayed series and growth include calculations: Supports retaining a conditional purchasing assumption rather than inserting a mandatory farm-equipment acquisition surge.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies staggered 2025-2027 compliance dates and an assessment-based framework; does not provide equipment acquisition quantities or justify a purchasing surge.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The agricultural-water framework establishes compliance context but does not disclose equipment orders; constrains the forecast against treating a regulatory milestone as a mandatory purchasing surge.

18. FDA - Laboratory Accreditation for Analyses of Foods Program and Final Rule
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: LAAF covers specified testing circumstances and has staged capacity/compliance determinations. It constrains the model against applying a universal US equipment-purchase requirement.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Specified owners and consignees must use accredited laboratories in covered circumstances; this establishes external fulfillment, not universal instrument ownership or a purchase quantity.
19. Professional Samplers for Food, Pharmaceutical, Chemical and Environmental Industries
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer distinguishes collection hardware for bulk goods, liquids and frozen-food applications. This establishes category mapping, not a numerical sales weight. ([buerkle.de](https://www.buerkle.de/en/samplers/products))
20. Products and Accessories - Microbiology | INTERSCIENCE
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately marketed preparation equipment supports its distinct functional budget; product listings do not determine the allocation weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Combined incubation/reading offerings establish commercial overlap, supporting one-time principal-function attribution rather than duplicated equipment revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Standalone readers are distinguished from preparation and integrated incubation products, supporting non-overlapping category accounting. ([interscience.com](https://www.interscience.com/en/products/))
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately lists sample-preparation hardware, supporting the mechanical/fluidic purchased-function boundary rather than a sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Colony-reading and associated bacterial-analysis equipment establish a commercial role distinct from separately allocated preparation and thermal equipment.

21. PR18666 - 39903-251283 Percival Incubators - Contract History

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: CFIA's incubator contract awarded October xx.xx 2025 totals CAD xx.xx. It establishes dated procurement activity, not global unit prices or realized annual producer sales. ([canadabuys.canada.ca](https://canadabuys.canada.ca/en/tender-opportunities/contract-history/cw2410409-xx.xx))

22. Testo - Annual Press Conference, February 19, 2026

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports 2025 group revenue of EUR xx.xx, Industrial Services revenue of EUR xx.xx and xx.xx% Saveris growth. The mixed hardware/software/services recovery qualifies extrapolation of 2024 weakness but does not measure food-only hardware sales. ([testo.com](https://www.testo.com/de-DE/unternehmen/press-releases/xx.xx-xx.xx-2026-jahrespressekonferenz))

23. Digital Food Safety Management with testo Saveris Food

- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports xx.xx active sensors across more than xx.xx environments and distinguishes monitoring hardware from software and services. These undated installed-stock indicators support commercial presence, not annual shipments or a replacement rate. ([testo.com](https://www.testo.com/en-UK/solutions/food-safety-management))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies distribution centers among application settings; current sensor stock supports commercial classification, not logistics hardware ownership or annual sales.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies retail applications within an offering reporting xx.xx sensors across over xx.xx environments; the footprint is not backdated to 2025.
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies restaurant and catering applications; supports multisensor premises-monitoring relevance without converting software activity into hardware sales.

24. CSIR-CFTRI Procurement Plan for Financial Year 2025-26, Updated February 24, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed GC and HPLC procurement examples constrain chromatography hardware tiers, not worldwide sales mix.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Spectrophotometer budget examples illustrate equipment-price heterogeneity used in the cohort assumptions.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Costed PCR hardware supports equipment-only molecular valuation, not reagent or service revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Real-time PCR and thermal-cycler budgets constrain the range of molecular instrument values.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A separately budgeted flow cytometer provides a commercial hardware-cost reference, not safety-attributable purchasing volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Homogenizer and centrifuge budgets supply the mechanical side of the explicitly bounded xx.xx:xx.xx preparation-value proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Freezer and incubator budgets support separate thermal equipment attribution; planned values remain funding-dependent.
25. LOMA Systems - Understanding the FAQs
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer discussion establishes an X-ray price premium and differentiated purchasing role, but does not quantify a global ASP or substitution rate.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer identifies metal detection as generally less expensive for its distinct application set, supporting relative-price assumptions and continued participation.

26. Hanna Instruments - Foodcare Meters
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: US manufacturer asking-price examples include a USD xx.xx pH tester and higher-value portable meters; used only to constrain indicative hardware tiers.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A USD xx.xx thermometer example constrains the low-cost physical-monitoring tier. Current retail prices are not treated as observed 2025 producer realizations.
27. Neogen MDS Awarded Contract from USDA Food Safety and Inspection Service
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The June xx.xx 2024 institutional purchasing announcement supports continued commercial participation of a distinct molecular platform, not its global equipment-sales weight.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports more than five years of prior agency use and a renewed purchasing relationship for the isothermal platform; instrument-only consideration is not disclosed.
28. CDC - PulseNet Timeline
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Documents an institutional sequencing role within the broader molecular category, qualifying a universal industrial-platform replacement assumption.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: All xx.xx state public-health laboratories transitioned to sequencing surveillance in 2019. This supports established deployment, not worldwide equipment revenue or forecast placement counts.
29. bioMérieux - GENE-UP
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A marketed foodborne-hazard detection instrument supports the molecular equipment category and continued commercial availability, not sales volume.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: GENE-UP establishes a distinct marketed PCR offering; associated assays and support are not included as separate equipment revenue.

30. Hygiena - EnSURE Touch ATP Hygiene Monitoring System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: EnSURE Touch establishes a marketed ATP hygiene-monitoring instrument within the broader luminescence category. Its listing does not measure placements or separately supplied software revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes the cleaning-verification equipment category and multi-application platform boundary only; it supplies no 2025 sales weight or installed-base observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies EnSURE Touch as a handheld hygiene-monitoring instrument connected to SureTrend, supporting portable-reader classification without assuming independence from software or support relationships.
31. R-Biopharm Food & Feed Analysis - Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: RIDA CUBE SCAN establishes a marketed enzymatic/colorimetric reader, including a sulfite application, supporting the broader biochemical boundary beyond immunoassay readers without establishing revenue.
32. FOSS - BacSomatic
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: BacSomatic establishes a commercial flow-cytometry offering for raw-milk hygiene assessment; broader quality and somatic-cell activity is not automatically food-safety-attributable revenue.
33. Mirion - FoodScreen Radiological Food Screening System
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FoodScreen establishes an offered radiological food-screening system, supporting a commercial category distinct from physical-contaminant X-ray inspection. No sales or installed-base quantity is disclosed.
34. Agilent Technologies, Inc. - Fiscal 2025 Form 10-K
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FY2025 food revenue was USD 637m versus USD 592m; company-wide instrumentation revenue was USD 2427m versus USD 2354m. These broader-scope inputs constrain analytical hardware scale and relative growth, not objective shares.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Food and instrumentation disclosures constrain a shared analytical-platform proxy but do not identify allergen-specific sales.

35. bioMérieux - 2025 Financial Results
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports EUR xx.xx.3m group equipment sales, EUR xx.xx.8m total sales and EUR xx.xx.9m Industrial Applications sales in 2025. Separate equipment, reagent, service and rental categories constrain hardware eligibility; equipment growth is a forecast calibration input, not a future share observation.
36. Switch to EnSURE Touch - Hygiena
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A conditional hardware trade-in offer shows that placements and standalone equipment realization can diverge. Used to temper the forecast price/mix assumption, not backdated to 2025 or treated as observed uptake.
37. Sum Up of Radionuclide Test Results Reported in FY2024 - Report as of March 31, 2025
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Japan reported xx.xx food radionuclide samples in FY2024, ended March xx.xx 2025. This is an activity comparator supporting continuing surveillance, not equipment purchases or calendar-2025 equipment revenue.
38. FSMA Final Rule for Preventive Controls for Human Food - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes monitoring and verification responsibilities. Supports the commercial objective boundary and the assumption that required records do not automatically create new-equipment purchases; supplies no purchasing quantity.
39. Environmental Sampling - FDA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Environmental sampling can concern named microbial hazards. Supports attributing relevant equipment to microbiological objectives rather than automatically classifying environmental activity as nonspecific hygiene.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes food-production environmental contamination from product sampling and covers contact and non-contact surfaces; supports the environmental application boundary, not market size.

40. Metastudy on Food Testing Laboratories in India
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Historical NABL data identify captive food-business laboratories while warning that many captive facilities fall outside accreditation coverage.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Private laboratories account for xx.xx% of the historical accredited population; this is an ownership proxy, not equipment spending.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Central and state government categories total xx.xx% of the historical accredited population, supporting a distinct public institutional cohort.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Institutional laboratories represent xx.xx% of the historical accredited population; global academic equipment attribution remains modeled.
41. Ishida X-ray Technology Delivers Enhanced Quality Control for Poultry Line - Nikas Case Study
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports an installed inspection system at Nikas's food-manufacturing factory; planned additional systems are not treated as realized sales or a global allocation weight.
42. Accreditation of Laboratories to Conduct Food Testing - Preliminary Regulatory Impact Analysis
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: A historical survey of xx.xx multi-farm egg owners reported xx.xx% using state/public-university laboratories and xx.xx% private laboratories; a narrow check against assuming farm ownership.
43. Legislation - Food Contact Materials
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer compliance documentation establishes a commercial responsibility but does not distinguish internal equipment ownership from accepted external evidence.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Establishes material-safety compliance documentation and traceability obligations distinct from surface contamination; supports the allocation boundary, not an observed equipment-purchase ratio.

44. Retail Food Protection
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: FDA identifies more than one million US retail/foodservice establishments in aggregate; supports a large premises-monitoring universe, not the modeled global retail count.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Includes restaurants, cafeterias and institutional outlets in the regulated universe; supports foodservice monitoring relevance without measuring annual purchases.
45. FSMA Final Rule on Sanitary Transportation of Human and Animal Food
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates shippers, loaders, carriers and receivers and their responsibilities; supports acquisition-authority attribution rather than allocating hardware to every shipment participant.
46. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Competition covers one instrument and additional support; the workspace records a February xx.xx 2026 award-notice publication, not hardware-only realized value or 2025 sales.
47. Equipment Grants Program
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The 2026 program lists USD xx.xx estimated funding and USD xx.xx-xx.xx awards for shared food/agricultural science equipment; neither amount measures global food-safety sales.
48. Thermo Fisher Scientific - Quality control, beyond the standard: Innovative products for quality control in food and beverage production
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The food-and-beverage portfolio distinguishes portable meters and reusable handheld equipment from laboratory installations. This supports configuration mapping only, not numerical sales weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists benchtop preparation equipment, laboratory refrigerators, clean benches and microbiological incubators, supporting the standalone classification of the relevant inherited laboratory budgets.

49. MAS-100 Eco Airsampler for food industry - Merck
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies MAS-xx.xx Eco as portable sampling equipment for the food-and-beverage industry. Establishes a commercial sampling-category mapping, not a sales fraction or equipment-use instruction.
50. Sampling System - Dinnissen
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes a dedicated automated sampling offering for food producers and production installations. Supports the production-connected sampling category; neither broader processing equipment nor full-system project value is included in the modeled sampling numerator.
51. ID 6121155 - AFBI - Supply, Delivery and Support of a Liquid-Chromatographic Mass-Spectrometer - UK7 Contract Details Notice, March 13, 2026
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The official contract notice reports GBP xx.xx excluding VAT, signed February xx.xx 2026, for an LC-MS package including support obligations. It tests the handover and package-comparability finding but does not establish 2025 equipment revenue, completed delivery or a hardware-only price.
52. testo 104-IR - Dual purpose IR and penetration thermometer
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The manufacturer markets a pocket-sized food thermometer for receiving and inspection roles, supporting portable preventive-monitoring attribution without establishing its market weight.
53. Testo - Automated monitoring and documentation of temperatures at all refrigerated sites with testo Saveris 2
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: The dated supermarket offering describes a three-logger connected monitoring package. It supports classifying fixed facility monitoring separately from production-line integration; the package count is not used as a sales-share weight.

54. Frequently Asked Questions - Wholesale - U.S. Census Bureau

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Manufacturer-controlled sales offices support direct attribution; affiliation, not a local office label, determines classification. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Own-account buying and resale supports the distributor numerator boundary. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Commission-based intermediation is distinguished from own-account dealing; the classification does not measure its market prevalence. ([census.gov](https://www.census.gov/programs-surveys/economic-census/year/2022/about/faq/faq-wholesale.html))

55. Agilent Technologies, Inc. - Fiscal 2025 Annual Report

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Describes predominantly direct applied-market selling; this supports the larger-system cohort premise, not the assumed xx.xx% probability. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies an active reseller program alongside direct selling, supporting a nonzero resale route within the analytical-equipment model. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies sales agents supplementing geographic and smaller-account coverage. This supports the agency model's commercial premise, not its numerical share or a future observed allocation. ([s24.q4cdn.com](https://s24.q4cdn.com/xx.xx/files/doc_financials/2025/ar/A-ARS-xx.xx-K-BMK-2025.pdf))

56. METTLER TOLEDO - General Distribution Terms

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Requires distributors to transact on their own account and provide corresponding customer warranty support, supporting role attribution and continuing commercial relevance without providing sales weights. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Expressly distinguishes the distributor relationship from agency, supporting separation of own-account resale from commission-mediated manufacturer sales. ([mt.com](https://www.mt.com/ca/fr/home/site_content/legal/distribution-terms/Mettler-Toledo-GDT.html))

57. Mettler-Toledo Standard Terms and Conditions for Sales and Service

- Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))
- Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies the contracting manufacturer entity through order documents and makes additional costs and services order-specific. Supports direct attribution and the hardware-only valuation bridge, not a numerical channel share. ([mt.com](https://www.mt.com/gb/en/home/site_content/legal/commercial_terms/sales_service_terms_glo.html))

58. Food and Beverage Resource Guide for Commercial Food Testing Laboratories
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Supplier portfolio spans multiple food-safety application categories, supporting fractional attribution of shared analytical equipment rather than one instrument per commodity.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies fats and edible oils within the supplier analytical portfolio; establishes application mapping, not category revenue.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists supplement-related analytical applications; supports commercial-category relevance without quantifying the modeled purchasing exposure.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Lists food-additive and processing-aid analytical applications, supporting a distinct ingredient-safety allocation premise.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Identifies food-contact-material safety applications; supports the material-safety boundary rather than surface-hygiene substitution.

59. Food Categories - Codex GSFA
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Hierarchical food descriptors constrain the product crosswalk; they are not equipment-spending weights.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separates dairy products and analogues from fat-product categories.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes edible ices separately from dairy products; supports the non-dairy frozen-dessert boundary, not a sales observation.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Separately recognizes confectionery and sweeteners, combined within the retained node.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes cereals from bakery wares; the retained node combines both.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes eggs and egg products as a distinct commodity group.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Category xx.xx supports the combined seasoning, soup, sauce and protein-product crosswalk.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes special dietary foods and supplements separately.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes beverages separately from dairy-based products.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes ready-to-eat savory snacks as a product category.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Recognizes prepared foods, supporting supplied-product attribution rather than ingredient double counting.
60. FAO Food Outlook: Global Output of Key Food Commodity Crops on Course for New Records
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports xx.xx tonnes of global hen-egg production in 2023, with China contributing xx.xx%; constrains global commercial footprint, not equipment revenue.

61. Dairy and Dairy Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Official world-milk production projection of xx.xx% annually implies approximately xx.xx% over seven years; independently constrains, but does not verify, the modeled xx.xx% dairy exposure increase.
62. Fish and Other Aquatic Products - OECD-FAO Agricultural Outlook 2025-2034
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Reports approximately xx.xx Mt of aquatic production in 2024 and xx.xx% food-use allocation in the projection base period; qualifies a US-only processing proxy.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Projects aquatic food demand increasing xx.xx% over ten years, constraining the modeled seven-year seafood exposure multiplier to xx.xx; equipment conversion remains assumed.
63. Safe Water Saves Water
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Distinguishes intended food-chain water uses and describes voluntary fit-for-purpose guidance; supports a separate input-water matrix without implying mandatory equipment ownership or purchase quantities.
64. Safety That Suits You - Testo
    - Evidence informing base-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.
    - Evidence informing forecast-year allocation inputs; displayed values and growth are calculated: Markets standalone transport/storage loggers and connected monitoring offerings. Establishes commercial role and alternative configurations, not historical shipments or a market-share percentage.

16.2. China

Table 365. China Food Safety Testing Equipment Market Size, 2017-2040 (USD Million)

Country	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
China	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 366. China Food Safety Testing Equipment Market Size, by Equipment Type, 2017-2040 (USD Million)

Equipment Type	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Analytical Instruments & Test Readers	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Product Safety Inspection Systems	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Safety-Condition Measurement & Monitoring Equipment	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Sample Preparation & Handling Equipment	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Sampling Equipment	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Test Incubation & Culture-Handling Equipment	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 367. China Food Safety Testing Equipment Market Size, by Technology Platform, 2017-2040 (USD Million)

Technology Platform	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
Affinity & Biochemical Assay Platforms	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Bioluminescence & Chemiluminescence	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Chromatography & Electrophoresis	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Culture-Based Microbiology	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Electrochemical Analysis	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Flow Cytometry	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Mass Spectrometry	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Mechanical & Fluidic Sample Handling	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Metal Detection	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Nucleic Acid Amplification & Sequencing	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Optical Imaging & Machine Vision	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Physical Property Metrology	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Radiometric Analysis	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Spectroscopy & Photometry	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Thermal Sample Conditioning	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
X-Ray Imaging	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**

Table 368. China Food Safety Testing Equipment Market Size, by Nucleic Acid Amplification & Sequencing, 2017-2040 (USD Million)

Nucleic Acid Amplification & Sequencing	2017	2024	2025	2026	2027	2032	2040	CAGR (%)
DNA Sequencing Platforms	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Isothermal Amplification Platforms	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
PCR Platforms	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx	xx.xx
Total	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**	**xx.xx**
